

## Clo® TECNICA Vivo

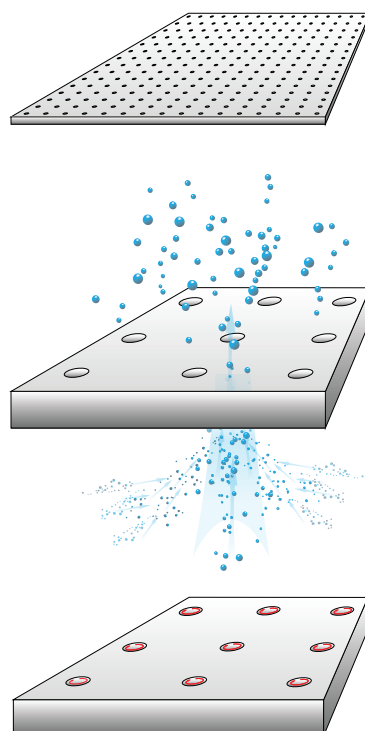

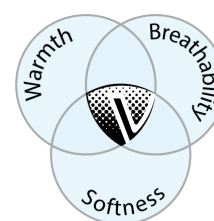

Vivo is the concept where a series of small apertures are set within the insulation to enhance the breathability without decreasing the thermal performance. The holes are a unique size which are visible enough to notice a difference but too small to allow air to circulate thus trapping the air to maintain the insulation properties. A number of tests carried out have demonstrated that the Vivo concept increases the breathability of the insulation by over 30% which brings about a massive uplift in comfort when in use between breathable fabrics of a jacket or garment

### TRIAD OF COMFORT

**WARMTH:** To maintain body temperature in cold conditions.

**BREATHABILITY:** To allow moisture to move away from body heat, thereby maintaining a constant body temperature.

**SOFTNESS:** To create garments that feel great.

1. Insulation with the Vivo concept
2. When the wearer is active and perspiring moisture flows freely and easily through the holes
3. When the wearer is inactive the holes trap warm air

**Clo® Insulation is focused on a sustainable future.**

**Reducing Waste:** Made by factory that strives to reduce unnecessary raw material waste by recycling and utilizing excess polyester fibers.

**White Recycled Staple Fiber:** This product has been independently verified to be made of 100% post-consumer recycled polyester.
